HI!!!! I'M CAROLINE

I have been eating a whole-food vegan diet for 11 years now and am so excited to bring Hailey on this journey with me!

If there is one thing I have learned from early on in motherhood, it's that your baby is your mirror. YOU are setting the example for everything.

Getting your baby to love vegetables and healthy foods really starts with having a healthy diet during pregnancy and showing your baby day in and day out what YOU eat to nourish your body and feel your best. Good nutrition, no caffeine (for you or your baby) and a happy environment plays a huge role in having a calm and content baby. Let's get you started!

WHAT IS BABY LED WEANING?

BLW = self feeding from the start!

Baby Led Weaning means you are encouraging your baby to self-feed themselves from the beginning. You're presenting appropriately sized foods instead of spoon-feeding purees.

This approach has so many benefits which I'll get to in a second but also often scares moms away due to the risk of choking. I totally get that and was afraid myself until I took a BLW course and also did a baby first aid course which I highly, highly recommend that all new parents take before starting your weaning journey.

You'll feel a lot more confident and be equipped for any possible choking incidents.

Baby Led Weaning is all about allowing your baby to discover foods naturally by teaching them how to pick up foods and self-feed at their desired pace. It's all about exploring the different textures and flavours and improving their motor skills by picking up the food and putting it into their mouth. What I have also learned is that the risk of choking is much smaller when your baby self-feeds compared to you putting food into your baby's mouth.

In the beginning, it can seem like they don't eat much and mostly play around with the food which is totally fine. They'll get there! Meal times really turn into a fun but also messy (hahaha veryyy messy) experience. It is so amazing to build a healthy relationship with food from the beginning onward!

@CarolineDeisler

BLW BENEFITS

AND WHY YOU SHOULD GIVE IT A GO

FAMILY MEAL TIMES

It's sooo nice for you AND your baby to sit at the table together and make family meal times a routine. Your baby will see you eating and will automatically feel included rather than being spoon-fed at a different time.

MOTOR SKILLS

BLW is a great opportunity for your baby to improve motor skills. Grabbing food, picking it up from the plate, putting it into their mouth, and so on will give them great confidence and help with their development.

PREVENTS PICKY EATING

Presenting a large variety of foods and letting your baby choose what they like gives them the feeling that they are in control which is very important. Keep offering different things and don't be discouraged if your favs are not their favs!

FUN

I always try to make meal times fun and playful. Cutting foods into cute (and appropriate) shapes, making delicious healthy recipes, and never pushing them to eat something they don't like helps a lot to keep it all a little light hearted.

CONFIDENCE

Applauding when your baby picks up food properly instead of doing it for them makes them feel like they've achieved something and boosts their confidence from early on. You have to be a little patient sometimes, but it's worth it.

BLW BENEFITS

AND WHY YOU SHOULD GIVE IT A GO

HEALTHY EATING HABITS

BLW also basically means you're giving your baby fresh whole foods from the beginning. I never fed Hailey any store-bought baby food and she looooves her broccoli, avocado, celery juice, fruits etc. You're giving them the best start!

EXPLORATION AND CURIOSITY

Having a colourful plate of different fruits and veggies makes them curious to explore the different colours, textures, shapes etc. rather than being spoon-fed purees. This makes them more curious in general and helps with their development.

AVOID OVERFEEDING

When your baby leads the way there is very little room for overfeeding. Your baby also learns that you respect their 'no's' which early on is something they explore a lot. Them giving you a sign that they've had enough is important to acknowledge.

EATING ADULT FOOD

Your baby is basically eating adult foods (with slight adjustments) from the beginning which improves their jaw development as they have to chew more. This makes your life easier and gives you an amazing opportunity to bond as a family together.

@CarolineDeisler

HOW TO CUT FOODS

from 6 months+ it's all about cutting foods into finger-long shapes to decrease their chances of choking.

Cutting all fruits, veggies, and meals into long strips/shapes makes it the easiest for your baby to hold foods. This also helps to reduce the risk of choking as your baby can take bites

from the bigger piece instead of placing whole pieces in their mouth like would be the case with things like grapes, for example.

Getting a crinkle-cutting knife is also an amazing idea to help add more grip to fruits and veggies or sprinkling hemp seeds on avocado so it's less slippery. In general, focus on long finger-sized food pieces.

VEGAN FOODS TO AVOID

FOR 6 MONTHS+ BABIES

GRAPES / HARD NUTS

Grapes can be a choking hazard and I personally haven't given any to Hailey. Blueberries are best avoided in the beginning as well but fine from 12 months+ when you smash them or cut them in half. Nuts are great blended but never whole.

RAW APPLES

Apples are better to serve cooked in the beginning. A little later on I started grating them into recipes or adding them to smoothies like my [apple pie shake](#) but I avoided giving Hailey big apple chunks.

SALT / SUGAR / HONEY

Salt, sugar, and honey are a no-no for your baby. I personally only use a bit of pink Himalayan salt for my own food which I then left out for Hailey. From 12 months+ I didn't worry too much about a tiny bit of salt when I ordered, for example, hummus at restaurants but in general I tried to avoid it.

Please keep in mind I am not a pediatrician or a dietitian and am only sharing my own experience. Please always consult with your doctor about what YOUR baby needs or should avoid,

OTHER USEFUL TIPS

CHOKING VS GAGGING

Gagging is a normal reflex for your baby to bring food back up and it naturally prevents choking. Gagging can feel scary (more so for the parents than for your baby) and is very likely to happen when introducing solids. It's important even so to let your baby bring the food forward. Don't place your finger into your baby's mouth trying to get it out as you'll risk pushing the food further back.

It's also suuuper important to stay calm and to encourage your baby with clapping and forward-moving gestures to bring the food up rather than freaking out as that can also cause your baby to inhale and push the food further back. Again, I highly recommend looking for a baby first aid course in your region as you'll feel so much more relaxed about it and know exactly how to react.

GAGGING

making noises
coughing
face turns red

CHOKING

baby is silent
face turns -
blue/purple/ashy

EATING ENVIRONMENT

Always make sure you are eating in a peaceful and calm environment so your baby can fully focus on their food and not be rushed or distracted.

SITTING UP STRAIGHT

Your baby is ready for solids when they can sit upright without any support. This usually happens around 6 months of age.

@CarolineDeisler

SAFETY

Never leave your baby alone while eating and always have a phone close by in case you need to call 999 (UK). It sounds scarier in the beginning than it actually is and don't worry, we'll focus on all the fun parts next but it is always better to be safe, fully prepared and equipped for what to do JUST IN CASE. :-)

FOOD TEXTURE

Foods should be soft enough to mash with your fingers for babies 6 months+ but they also don't have to be suuuper soft. Your baby's gums are pretty strong even without teeth! Hailey loved biting on cold cucumbers to cool her gums and reduce teething pain.

PUREES & BLW

If you are worried that your baby isn't eating enough, you can also do a mix of Baby Led Weaning AND feeding purees OR even better yet, let your baby spoon-feed purees to themselves. I loved making smoothies and oatmeals for Hailey from the beginning. That way I knew she was getting lots of good healthy fats in which can be a little tricky in the beginning. If there is one piece of advice I would follow, it's to listen to your gut feeling. A mom's intuition is still the absolute best and you'll naturally develop a sense of what is the right approach for *your* baby.

THE MESS

If this is your first baby, you'll be quite shocked at how messy things get! I wasn't prepared for this haha. One thing I do really recommend though is to enjoyyyyyy the mess WHILE your baby is eating and then clean up afterwards instead of wiping your baby's face while they're eating as this can be irritating and will make the whole process less enjoyable. Remember, it is supposed to get messy, and as long as you are well equipped with a floor mat and bib it's quite easy to control and keep the mess in ONE PLACE hehe. Overall, I have been lovvvvvvv the whole journey.

@CarolineDeisler

SUPPLEMENTS

Please consult with your pediatrician first as it differs from child to child. I have been giving Hailey a baby probiotic with added **Vitamin D** (called bio Gaia), a vegan **iron** supplement from Nature's Aid and I am now also giving a **DHA** supplement (from Nature's Aid as well). It's veryyyy difficult to find good supplements with zero additives or vegetable oils so you have to distinguish what's more important to you. I can't tell you exactly what to do but only share what we have been doing.

Babies get their iron stores filled up in the last part of the pregnancy and also get lots of iron through the blood that goes back to their body from your placenta after birth before the cord is clamped. That's why delayed cord clamping has many benefits. However, not every birth happens that way or is exactly the way we ideally had envisioned it riiight haha.

About 6 months post-birth is when your baby's iron stores naturally deplete and is why it's extra important to focus on iron-rich foods for babies once you start introducing solids.

Omega-3 is another veryyyy important nutrient for your baby's brain development and something I would keep an extra eye out for. I love adding chia, hemp, flax and pumpkin seeds to smoothies, sauces, and porridges to give them an extra omega-3 boost as seeds can be hard to digest if they're not blended.

B12 is also something to be extra mindful about especially when weaning your baby vegan. The Iron supplement I am giving Hailey also contains B12 and I also love using nutritional yeast with added B12.

Calcium is a very important mineral for your baby and also for you if you are breastfeeding. Breastfeeding moms need double the amount of calcium, otherwise, your body will prioritize your baby's needs before yours and you'll end up having teeth and bone problems later down the line. You can find coconut yogurt with fortified calcium for an extra boost and focus on calcium-rich foods like edamame beans, broccoli, kale, soy milk, and tofu.

GETTING STARTED

FOR BABIES 6 MONTHS+

SIGNS THAT YOUR BABY IS READY

Your baby has to be able to sit up straight without any support which usually happens around 6 months but don't stress about it, every baby is different and there is no rush. I started with Hailey at 7 months.

ALLERGENS

There are certain foods that are more commonly an allergen like nuts, soy, dairy, wheat, eggs, and seafood. It's important to introduce one at a time to see how your baby reacts. If you are weaning your baby vegan, you don't HAVE to introduce dairy, eggs, and seafood just to test if there is an allergy. Go by how YOU feel about it. I personally have given Hailey wheat, all nuts, and soy so far and she hasn't had any reaction but again every baby is different. Coconut can also be a common allergen.

EVERYTHING YOU NEED

To get started there are a few things that make your life easier:

- Baby high chair
- Floor mat
- Silicone bib

LET'S GO!!!!

Now that you know all the basics and are readyyyy for your baby to explore solid foods, the fun starts!!

Get creative in the kitchen, make cute little variations, prep foods for a few days since you'll need tiny portions, and enjoy mealtimes with your baby.

Hailey's first food was watermelon, soon after that we tried bananas, avocados and she looooved broccoli. I first gave her mostly whole foods so she could focus on each food individually and soon after that we started with recipes.

A few weeks in, I started making porridges, chia puddings, muffins, pasta, veggie patties etc. and now that she is 15 months I have an amazing collection of go-to recipes I make weekly which I am so excited to share with you!!
